

THERMAL IMAGING SERVICE

Rationale for Pricing

CUECS purchased the thermal imaging camera for the purpose of surveying buildings within the university to provide a more comprehensive analysis to the colleges. The thermal imaging camera requires periodic calibration and replacement of components. As such, the funds obtained from the charging of these thermal imaging services provided will finance the maintenance of the camera.

Pricing Scheme

£50 per hour of thermal imaging conducted on-site (inclusive of thermal images, follow-up analysis and report)

In comparison, professional companies generally charge between £250 and £400 per house surveyed.
